Exercise 2 - how to use loops?

This is a continuation of exercise 1.
Try to add loop under below conditions:
- add loop to verify age of user
- if is younger than fifty display different message than in ex1
- if is elder than fifty display age of user
- change some variables from int to str
- correct year variable to birth_year
- make other corrections in your code

What you've learned what is and how to use:

- loop

Used Python modules in this exercise:
the same as in ex1

Source(s):

- loop: https://docs.python.org/3/tutorial/controlflow.html#if-statements
