Exercise 1 - when you will turn 50th birthday?

Create a program and ask user about:
- name
- year of birth

Provide a messages to user with following details:
- welcome user using user's name
- display year when user will turn 100 year old
- display how many years left for user to have 50th birthday
- what time is now

What you've learned what is and how to use:

- shebang
- variables
- input
- simple math problem
- single and multiple lines comment
- how to convert string to integer
- how to convert int to str
- today's date, year, hour

Used Python modules in this exercise:
- datetime
